

Chaitanya Nalawade

QA Automation Engineer | SDET

[+91-7517717879](tel:+91-7517717879) | chaitanyanalawade84@gmail.com | [LinkedIn](#) | [Portfolio](#)

SUMMARY

QA Automation Engineer with 2 years of experience building REST Assured, Selenium, and Playwright automation frameworks (Java, JavaScript) — cutting production bugs by 90% and manual testing time by 80%.

SKILLS

Test Automation: Selenium, Playwright, REST Assured (API Automation)

Programming Languages: Java, JavaScript, Python

Testing Practices: Automation Framework Design, Regression & Sanity Testing, API Testing, UI Journey Validation, Test Data Design (Permutation/Combination Coverage)

Databases: MySQL, MongoDB, PostgreSQL

Tools & Platforms: Git, GitHub, Azure DevOps, Kafka, ELK Stack (Elasticsearch, Logstash, Kibana)

AI/LLM Systems (Differentiator): RAG, LLM APIs (OpenAI), Vector Embeddings, ChromaDB, Prompt Engineering, LLM Observability (Langfuse), LangChain

EXPERIENCE

Associate Software Development Engineer in Test

Jul 2025 – Present

Bajaj Finserv Health Limited, Pune, Maharashtra

- UI Automation:** Automated critical end-to-end user flows using Playwright, cutting sanity testing time by 80% and ensuring UI stability across multiple user scenarios on a React (Vite) frontend.
- Framework Development:** Designed and implemented a Playwright Test Runner-based automation framework to dynamically create and validate end-to-end user journeys.
- Accessibility & Compliance:** Identified and resolved website accessibility issues, raising pull requests that improved usability and compliance.
- AI Knowledge Portal:** Built an internal RAG-based portal (OpenAI embeddings, ChromaDB, confidence-based guardrails) helping engineers and developers navigate complex, squad-specific domain knowledge — policy creation, hospital workflows, policy configuration. Achieved near-100% team adoption, with developers self-serving policy configuration queries directly instead of routing through QA, cutting query resolution time by 80–85%.
- AI Test Case Generation:** Developed an LLM-powered portal that auto-generates 10–15 critical P0 test cases directly from user stories, accelerating test design and improving early detection of P0 bugs across squads.
- Ground Truth & Evaluation:** Built ground truth datasets from corporate policy documents — member coverage, sum insured, age, diseases covered — to validate AI-extracted data surfaced to users, and generated accuracy scores to measure extraction reliability.
- Chatbot Automation:** Implemented chatbot response validation using JSON key-value assertions, ensuring accuracy and reliability of automated conversational flows.

Software Development Engineer in Test (Intern)

Jun 2024 – Jun 2025

Bajaj Finserv Health Limited, Pune, Maharashtra

- API Automation:** Maintained and enhanced a REST Assured (Java) API automation framework, reducing production bugs by 90% through permutation/combination-based test data design.
- Production Monitoring:** Built a Selenium-based production monitoring system for continuous 24/7 UI journey validation, with ELK-powered alerting on login success rate checked every 15 minutes — enabling early regression detection and cutting mean time to detect by 50%.
- Debugging Tooling:** Developed an automated cURL generator from ELK traces, streamlining API debugging and issue reproduction.
- CI/CD Integration:** Integrated automated test suites into CI/CD pipelines, monitoring builds and troubleshooting failures to ensure smooth, reliable deployments.
- Functionality Testing:** Strengthened manual and automated functional testing coverage, cutting testing time by 70% and improving bug detection by 80% ahead of releases.

EDUCATION

B.Tech, Computer Engineering

2021 – 2025

Pimpri Chinchwad College of Engineering, Pune

- CGPA: 8.63 (Distinction)

ACHIEVEMENTS

- Spotlight BFHL:** Maintained high release quality by delivering major releases with zero production issues for 4 consecutive months.
